

NatSteel Holdings Pte Ltd Fact Sheet

NatSteel Holdings Pte Ltd, or NatSteel in short, is a wholly-owned subsidiary of Tata Steel — the world's top ten largest steel producer. NatSteel is one of the top steel providers in the Asia-Pacific with over 3,500 employees in Singapore, Australia, China, Malaysia, Philippines, Thailand and Vietnam.

A new beginning

Tata Steel acquired the steel business of NatSteel Ltd in 2005. This marked a new beginning for the steel division, which is today known as NatSteel Holdings Pte Ltd.

Headquartered in Singapore, NatSteel is the Asia-Pacific hub which supports regional operations in production, engineering development, logistics, procurement, and environment and safety programmes.

Steel Production

As a group with steel production capacity of more than 2 million tonnes per year, NatSteel serves Asia's construction industry and targets to triple its growth by 2010. With its continuous growth within the region, NatSteel is on track to attaining its goal.

As the only steel mill in Singapore, having integrated melting-rolling-fabricating facilities, the company played an important part in building Singapore in its early years. Today, its full array of steel products is used for commercial buildings and residential housing, as well as infrastructure works such as tunnels, bridges and the Mass Rapid Transit system.

The upstream operation melts scrap steel in an 80-tonne electric arc finger shaft furnace and casts the molten steel into billets. These are processed into wire rods and reinforcement bars, which are fabricated into the final shapes and forms tailored to the specific needs of each job-site customer. NatSteel's downstream facility boasts one of the largest single cut-and-bend operations in the region.

Corporate Social Responsibility (CSR)

Community Initiatives

Having pledged \$1 million over three years to community initiatives, NatSteel is committed to serving the community in which it operates. It has also launched a CSR leave for staff, enabling them to reach out to the target underprivileged groups.

Environment Commitment

To do its part in corporate social responsibility, NatSteel has invested no less than S\$20 million in plant equipment that protects the environment through energy conservation, recycling, and pollution and waste reduction.

Human Capital Commitment

NatSteel has achieved many national accolades in recognition of its commitment to employees. It achieved the People Developer Standard in recognition of its quality people development practices. The company also won both the Work-Life Excellence Award and the Singapore Health Award (Gold) for three consecutive years.
